5. Description:-

a) Introduction, Theme, Significance

Information technology (IT) infrastructure are the components required to operate and manage enterprise IT environments. IT infrastructure can be deployed within a cloud computing system, or within an organization's own facilities. These components include hardware, software, networking components, an operating system (OS), and data storage, all of which are used to deliver IT services and solutions. IT infrastructure products are available as downloadable software applications that run on top of existing IT resources—like software-defined storage—or as online solutions offered by service providers—like Infrastructure-as-a-Service (IaaS).

b) Conduction, Guest details, Activity

The purpose of IT infrastructure is **to provide information technology teams with the structure to efficiently manage all technology and tools used by a company**. This is done with the ultimate goal to minimize downtime of products and systems, as well as providing security and scalability.
